

## Cycle A

### Science

Throughout the year the children will cover a variety of aspects of the science curriculum to ensure all children:

- develop **scientific knowledge and conceptual understanding** through the specific disciplines of biology, chemistry and physics
- develop understanding of the **nature, processes and methods of science** through different types of science enquiries that help them to answer scientific questions about the world around them
- are equipped with the scientific knowledge required to understand the **uses and implications** of science, today and for the future.

|                 |  |
|-----------------|--|
| <b>Autumn 1</b> | <b>Light - Including 'How the eye works' (6)</b><br>recognise that light appears to travel in straight lines<br>use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye<br><br>explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes<br><br>use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them. |
| <b>Autumn 2</b> | <b>Living Things and Habitats - Microorganisms (6)</b><br>To classify plants and animals based on specific characteristics.<br><br>To explain how living things are classified into broad groups according to common observable characteristics, including microorganisms, plants and animals.<br><br>To give reasons for classifying plants and animals based on specific characteristics   |
| <b>Spring 2</b> | <b>Forces – Buoyancy (5)</b><br><i>explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object</i><br><br><i>identify the effects of air resistance, water resistance and friction, that act between moving surfaces</i><br><br><i>recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.</i>  |
| <b>Summer 1</b> | <b>Evolution and Inheritance (6)</b><br><i>recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago</i><br><br><i>recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents</i><br><br><i>identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.</i>                          |
| <b>Summer 2</b> | <b>Living Things and Habitats - Life Cycles (5)</b>  |

|  |  |
|--|--|
|  | <i>describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird</i> |
|--|--|

|  |  |
|--|--|
|  | <i>describe the life process of reproduction in some plants and animals.</i> |
|--|--|

**Investigations – on-going throughout all units**

*planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary*

*taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate*

*recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs*

*using test results to make predictions to set up further comparative and fair tests*

*reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations*

*identifying scientific evidence that has been used to support or refute ideas or arguments.*
